

 Growth Simulation Engine™

Simulate your competency growth before you do the work

The Growth Simulation engine projects your competency trajectory across 3, 6, 9–month and 1–year horizons — modelled on real intervention durations, expected score gains, and gap priority order. See your future profile before you invest a single hour of development time.

Not aspirational projections — modelled on real intervention data and observed development velocity

01

Gap–Priority Sequencing

The engine sequences interventions starting with critical-severity gaps — the ones with the highest weighted impact on your role-fit and hiring scores. Critical gaps are addressed in weeks 1–12 by default.

Critical-first ordering

Weighted impact

Customisable sequence

02

Real Intervention Durations

Growth is not modelled on arbitrary percentages. Each intervention has a duration in weeks drawn from actual course completion data, and an expected score gain derived from observed outcomes across 14,200+ learners.

Actual course durations

Observed score gains

14,200+ data points

03

Domain–Level Trajectories

Projections are generated at the competency-domain level — not just overall score. You can see exactly which domains will improve the fastest and track progress across 3, 6, 9–month, and 1–year horizons.

Multi-Horizon Score Projection

Your overall competency score projected at 3, 6, 9 months and 1 year — with domain-level breakdowns at each horizon.

4 time horizons

Domain-level

Domain Trajectory Charts

Visual growth bars for each competency domain showing current score, intervention gain, and projected end-state — per selected horizon.

10 domains

Visual bars

Prioritised Intervention Sequence

A ranked intervention plan — ordered by gap severity and score impact — showing what to do first for maximum score lift in minimum time.

Gap-priority ordered

Max lift sequencing

Month-by-Month Milestones

A milestone timeline showing which interventions complete at which months and what readiness or hiring score threshold they unlock.

Timeline view

Score milestones

Time-to-Target Estimate

The engine calculates how many months until your competency profile reaches your target role's required threshold score.

Target threshold

Month estimate

Scenario Comparison

Compare what happens if you focus on critical gaps only vs. a balanced approach vs. doubling intervention hours per week.

Side-by-side compare

 Why this simulation is different from generic learning projections

Evidence-based

Most development plans tell you to "take a leadership course" without quantifying the expected score impact, the time required, or the order in which to tackle gaps. MetryxOne's simulation uses observed score gains from 14,200+ learners who completed specific interventions — mapped to the interventions' actual duration in weeks. The output is a realistic, time-sequenced projection rather than a motivational aspiration.

Projection horizons

INTERVENTION TYPES MODELLED

Course

Self-paced or instructor-led. 4–12 weeks. Typical gain: 8–25 pts.

Programme

Structured multi-week programme. 8–16 weeks. Typical gain: 18–30 pts.

Workshop

Intensive short-form. 1–4 weeks. Typical gain: 5–15 pts.

WHAT PRACTITIONERS SAY

★★★★★

"I'd been stuck in the same role for two years telling myself I wasn't ready. The simulation showed me I was 4 months away if I focused on two competencies. I did. I made the move in 3.5 months."

Amara L.

Mid-Level PM → Senior PM · SaaS

★★★★★

"We use the growth simulation in all IDPs now. Instead of vague development goals, each team member has a score projection and a sequenced intervention plan. Manager conversations are 10× more productive."

Chris D.

Director, Learning & Development · Financial Services

★★★★★

"The intervention sequence was key. I was about to take a random leadership course. The engine told me my stakeholder management was the bottleneck — not leadership. Closed the right gap. Got the promotion."

Yuki N.

Senior Engineer → Engineering Manager · Technology

See your growth trajectory before you invest the time

Complete your competency assessment and run your personalised 6-month growth simulation — with domain-level projections, a prioritised intervention sequence, and a month-by-month milestone timeline. Free with every MetryxOne account.
