

Screen distraction

Curiosity Assessment · Lakshman

Concern	Screen distraction
Stage	Curiosity
Age	15 years
Date	11 May 2026

About this report

This is the Curiosity Stage report for Lakshman — the first stage of MetryxOne's CAPADEX behavioural intelligence assessment. It measures self-awareness and pattern recognition across 7 domains related to "Screen distraction", benchmarked against 10,000+ assessments using MetryxOne's validated Self-Diagnostic Intelligence (SDI™) framework.

For personal awareness and development purposes only. Not a clinical diagnosis or medical opinion. Seek professional guidance before making significant decisions based on these results.

Assessment finding

Lakshman's attention pattern is telling an important story — one worth understanding fully.

The Curiosity results are just the surface. Behind every attention struggle is a specific pattern of triggers, timing, and habits. The Insight stage maps that pattern precisely so real change becomes possible.

A score of 0 marks an important starting point. Recognising the pattern is the hardest step — and it has been taken. Everything that follows builds from this honest baseline.

Standout strength

Awareness

Score: 100% — This is a genuine strength in the overall profile. This area is performing well above the norm and provides a strong foundation for the next stage of development.

Your action plan

Based on your assessment, here are personalised next steps to support your growth:

1

Learning Style Optimisation Programme

Strengthen learning consistency and velocity over 2-3 weeks

1-2 weeks · moderate intensity

2

Learning Style Optimisation Programme

Strengthen learning consistency and velocity over 2-3 weeks

1-2 weeks · moderate intensity

3

Learning Style Optimisation Programme

Strengthen learning consistency and velocity over 2-3 weeks

1-2 weeks · moderate intensity

What comes next — your path to change

The Curiosity Stage shows the "what." The Insight Stage reveals the "why" — and how to change it.

A score alone does not create change. What creates change is understanding the specific triggers, timing patterns, and emotional drivers behind the behaviour — then building a strategy that fits this exact profile, not a generic template. That is what the Insight Stage delivers.

Questions the Insight Stage will answer for you:

1

Why does focus drop at specific times — and what can be done in those exact moments?

2

What emotional or environmental trigger is behind the attention pattern — it is almost never what people guess.

3

How does this attention profile compare to 10,000+ others — and what separates top performers?

Your next step is understanding the pattern.

The Insight Stage goes beyond scores to reveal exactly what is driving the "Screen distraction" pattern — and delivers a personalised strategy built around this specific profile, not generic advice.
